

Cost Analysis and Management in Construction

Construction Project Cost Management - An Overview of Concepts and Techniques

Introduction

The fundamental ideas and procedures of cost management for building projects are covered in detail in this training course on Cost Analysis and Management in Construction. Participants in this training programme will examine the foundational ideas of cost analysis, budgeting, and industry-specific control methods.

Participants will obtain a thorough grasp of how to efficiently estimate, monitor, and control costs throughout the project lifecycle through a combination of theoretical research and real-world case studies. This course gives you the knowledge and abilities you need to successfully navigate the complexity of construction cost management, regardless of your experience level in the industry.

The following will be covered in this Course N Carry Cost Analysis and Management in Construction training course:

- Fundamentals of cost analysis in construction
- Methods for calculating project expenses
- Techniques for setting a budget and managing construction costs
- Case examples from the real world that demonstrate cost management techniques
- Software and equipment for efficient cost analysis in building projects

Objectives

Upon completion of this training programme in Cost Analysis and Management in Construction, you will be able to:

- Use a variety of techniques to precisely estimate the costs of construction projects.
- To find possible cost-saving measures and reduce financial risks, analyse cost data.
- Create thorough cost management strategies and budgets for building projects.
- Make good use of industry-standard techniques and software when conducting cost analysis.
- Employ techniques to keep an eye on and manage project costs all the way through the building process.

Training Methodology

The Cost Analysis and Management in Construction training programme uses a multimodal teaching strategy that includes group discussions, case studies, interactive lectures, and hands-on training. Building cost analysis and management concepts are further explored by participants through practical exercises, case studies from the real world, and group discussions. Continuous evaluations and feedback promote the growth of skills, and on-going assistance guarantees a smooth learning process outside of the classroom, giving participants the know-how they need to succeed in construction cost management.

Organizational impacts

The following advantages will accrue to the organisation:

- Improved budget management and cost estimation accuracy.
- Enhanced decision-making during the planning and implementation of building projects.
- Simplified contract negotiating techniques for project delivery that is economical.
- Heightened effectiveness in detecting and reducing hazards associated with costs.
- Improved capacity for data analysis and interpretation about construction costs.
- Enhanced conformity with regulatory compliance standards and industry best practices.

Personal Impact

Following completion of this training programme in Cost Analysis and Management in Construction, learners will acquire the following skills:

- Advanced knowledge of construction cost analysis to enable precise project estimation.
- Techniques for strategic cost management that enhance budgetary control.
- Improved negotiating skills to secure advantageous terms and conditions in contracts.
- Useful information to reduce risks associated with costs and guarantee project success.
- Opportunities for career progress through advanced knowledge of cost management.
- A greater sense of assurance when tackling challenging cost-related building issues.

Who should attend?

A wide range of professionals can benefit from this Course N Carry Cost Analysis and Management in Construction training course, but the following will be very apparent:

- The goal of construction project managers is to improve their abilities in cost analysis and management.
- The goal of construction cost estimators is to advance their knowledge of project finances and estimate methods.
- Financial decision-making, procurement, and budgeting are all done by construction specialists.

- Graduates and students interested in jobs in quantity surveying, construction management, or similar professions.
- Effective cost management is of interest to contractors, subcontractors, and owners of construction companies that want to maximise project profitability.

Course Outline

Day 1

Overview of Construction Cost Management and Analysis

- An Overview of Trends in the Construction Industry
- Cost analysis is crucial for construction projects.
- Essential Ideas in Cost Control
- Structures for Breaking Down Costs
- Techniques for Cost Estimation
- Difficulties with Construction Cost Control

Day 2

Methods of Cost Estimation

- Calculating Labour Expenses
- Cost and Purchasing of Materials
- Rental and Expense of Equipment
- Overview of Estimating Software Tools
- Take-off Quantity and Cost Approximation
- Peer Assessment and Discussion

Day 3

Financial Planning and Budgeting

- Making Project Budgets
- Strategies for Cash Flow Management
- Evaluation of Financial Risk
- Options for Funding and Financing
- Techniques for Allocating a Budget
- Setting Up a Budget for Major Construction Projects
- Establishing Project Budgets

Day 4

Purchasing and Contract Administration

- Overview of Construction Contracting
- Kinds of Construction Contracts
- Assessment of Bids and Contractor Selection
- Contractual Terms Negotiation
- Best Practices for Contract Administration
- Effective Techniques for Contract Management
- Scenarios for Contract Negotiations

Day 5

Reduction of expenses and tracking of performance

- Fundamentals of Cost Management
- Methods of Variance Analysis
- Principles of Value Engineering
- Management of Change Orders
- KPIs and Performance Metrics
- Tracking the Development of the Project
