

Training in Fleet Safety Management

Creating a Fleet Safety Programme That Works

Introduction

The goal of this Fleet Safety Management training course is to make the attendees aware of how crucial fleet safety is to their company's operations. Transportation incidents can result in substantial losses, including property damage, business losses, hiring and training costs, injury and death, and wage losses.

Over 70% of an organization's supply chain expenses can be attributed to logistics and transportation costs, which are also associated with a number of risks and interruptions, many of which are regrettably brought on by accidents. For the best possible results in the delivery of goods and the transportation of people, adequate fleet safety management is necessary.

The following will be covered in this Course N Carry Training in Fleet Safety Management course:

- The significance of possessing Fleet Safety Plan Requirements for people transportation and vehicle use
- Sufficient qualifying criteria and driver selection
- Organisational requirements for driver training and international transportation
- Suitability of driver behaviour observation and assessment
- Investigating and reporting incidents

Objectives

Upon completion of this Fleet Safety Management course, you will have the ability to:

- Transform your fleet's culture of safety
- Create a safety plan for your fleet.
- Observe the guidelines for driver evaluation and training
- Get ready for the requirements that will soon be implemented for professional drivers.
- Make wise choices when choosing the fleet's vehicles.
- Accurately look into, document, and apply events' lessons learned

Training Methodology

We use multiple methods to equip students with the skills and knowledge. This includes online lectures, self-paced assignments, and exploration of case studies. Further, to help simplify the understanding of the principles, we use visual presentation. We also conduct role-playing sessions to help students apply the knowledge to the real world.

Organizational impacts

Organisations must safeguard their personnel, property, and business processes against any harm or damage that may result from using their fleet. This is accomplished by:

- Sufficient execution of the car sector initiative
- Choosing drivers and meeting the requirements for driving qualification
- Appropriate driver monitoring and incentive programmes through monitoring and driver evaluation
- Utilising contemporary technologies for driver monitoring and fleet management
- Techniques for conducting effective investigations and applying lessons learnt

Personal Impact

The following are the ways in which participants in this fleet safety management training course will fully understand the current approaches to fleet safety management:

- Acquiring knowledge about creating a fleet safety management plan
- Recognising the updated driver qualification requirements
- Learning about the mother techniques for tracking driver behaviour
- Gaining understanding of how to win over drivers' hearts and minds
- Taking note of other businesses' and nations' best practices
- Recognising the relationships with the courts, police, and car inspection stations

Who should attend?

All professionals working in the fields of supply chain and logistics, transportation, fleet management, project planning, traffic police, the judiciary handling traffic cases, and those operating and managing vehicle inspection facilities are targeted by this Course N Carry Training in Fleet Safety Management.
